CONSORTIUM

Eco-SESA:

- 16 laboratories, 100 researchers
- Grant 1,7M€ for 4 years

Directory:

- Frédéric Wurtz – G2Elab
- Gilles Debizet – PACTE

Leaders of research fronts:

- Stéphane Ploix – G-SCOP
- Daniel Llerena – GAEL
- Gilles Debizet – PACTE
- Frédéric Wurtz – G2Elab
- Daniel Bellet – LMGP

NEW PARADIGM

Taking up the challenge of climate change, renewable energies call into question the historical functioning - centralized and unidirectional - of networks and allow direct exchanges between buildings and communities at the neighborhood scale.

Eco-SESA aims to rethink the planning, design, management and governance of urban energy systems as well as the design of their components **by jointly taking into account human decisions and technical systems.**
